KUKA KR 6 R900 sixx

KR AGILUS Family · 6-DOF Industrial Arm

ENGR 431 Final Project · Janga Bliss · Fort Lewis College

KR 6 R900 sixx

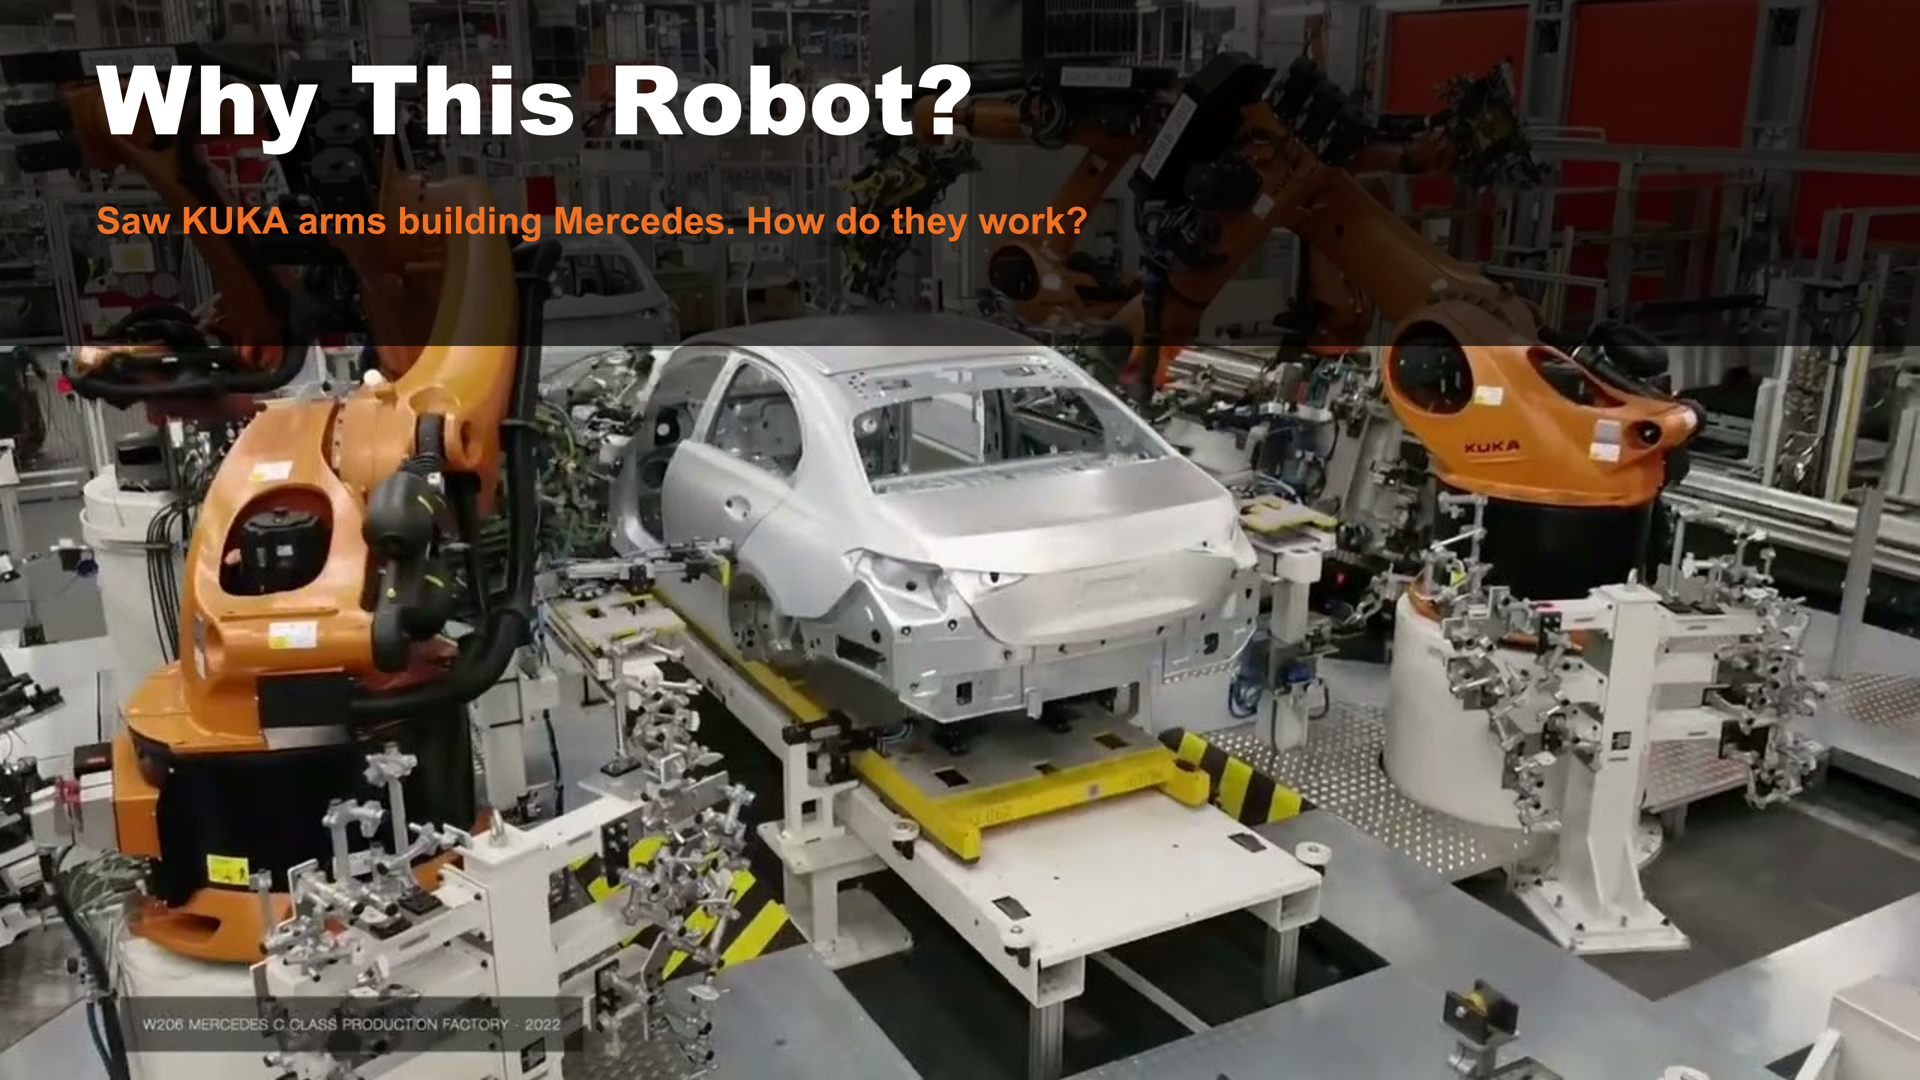
KR AGILUS Family

6 DOF	all revolute joints
0.9 m	reach
6 kg	payload
52 kg	arm weight
±0.03 mm	repeatability
Spherical wrist	axes 4-5-6 intersect

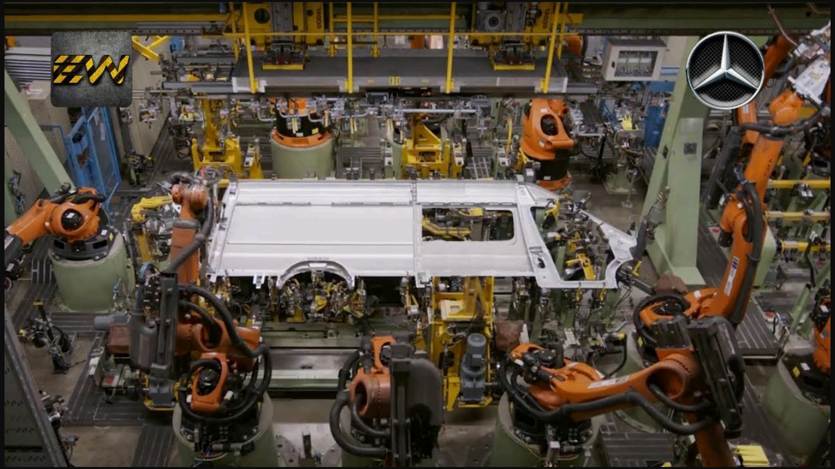
Floor · Ceiling · Wall — Welding · Assembly · Handling

Why This Robot?

Saw KUKA arms building Mercedes. How do they work?



The KR AGILUS at Work



Panel Handling

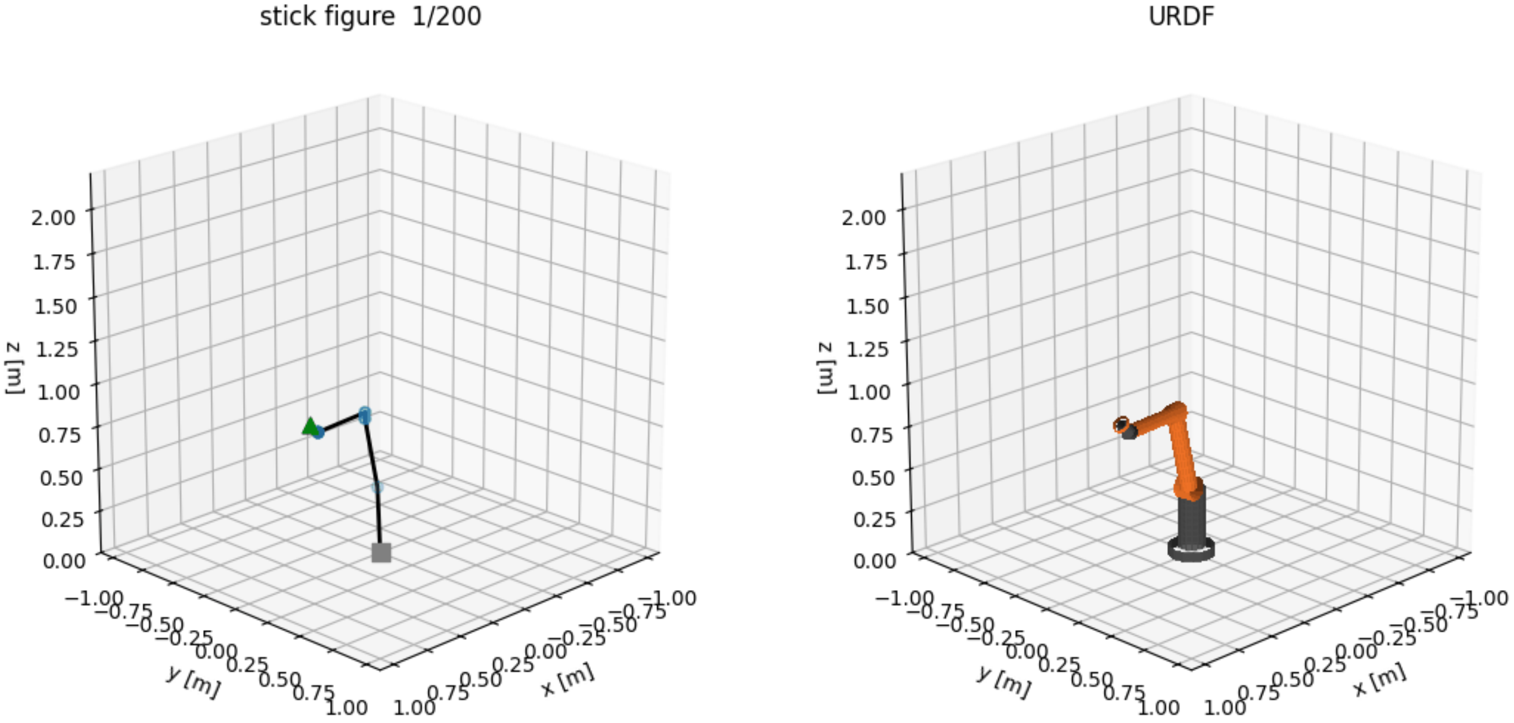
8+ arms position a full van side panel
in perfect coordination, with no humans

Welding Line

Tons of arms welding simultaneously
sparks flying, sub-millimeter precision

One factory can have **1,000+ KUKA robots** on a single production line with each one repeatable to ±0.03 mm

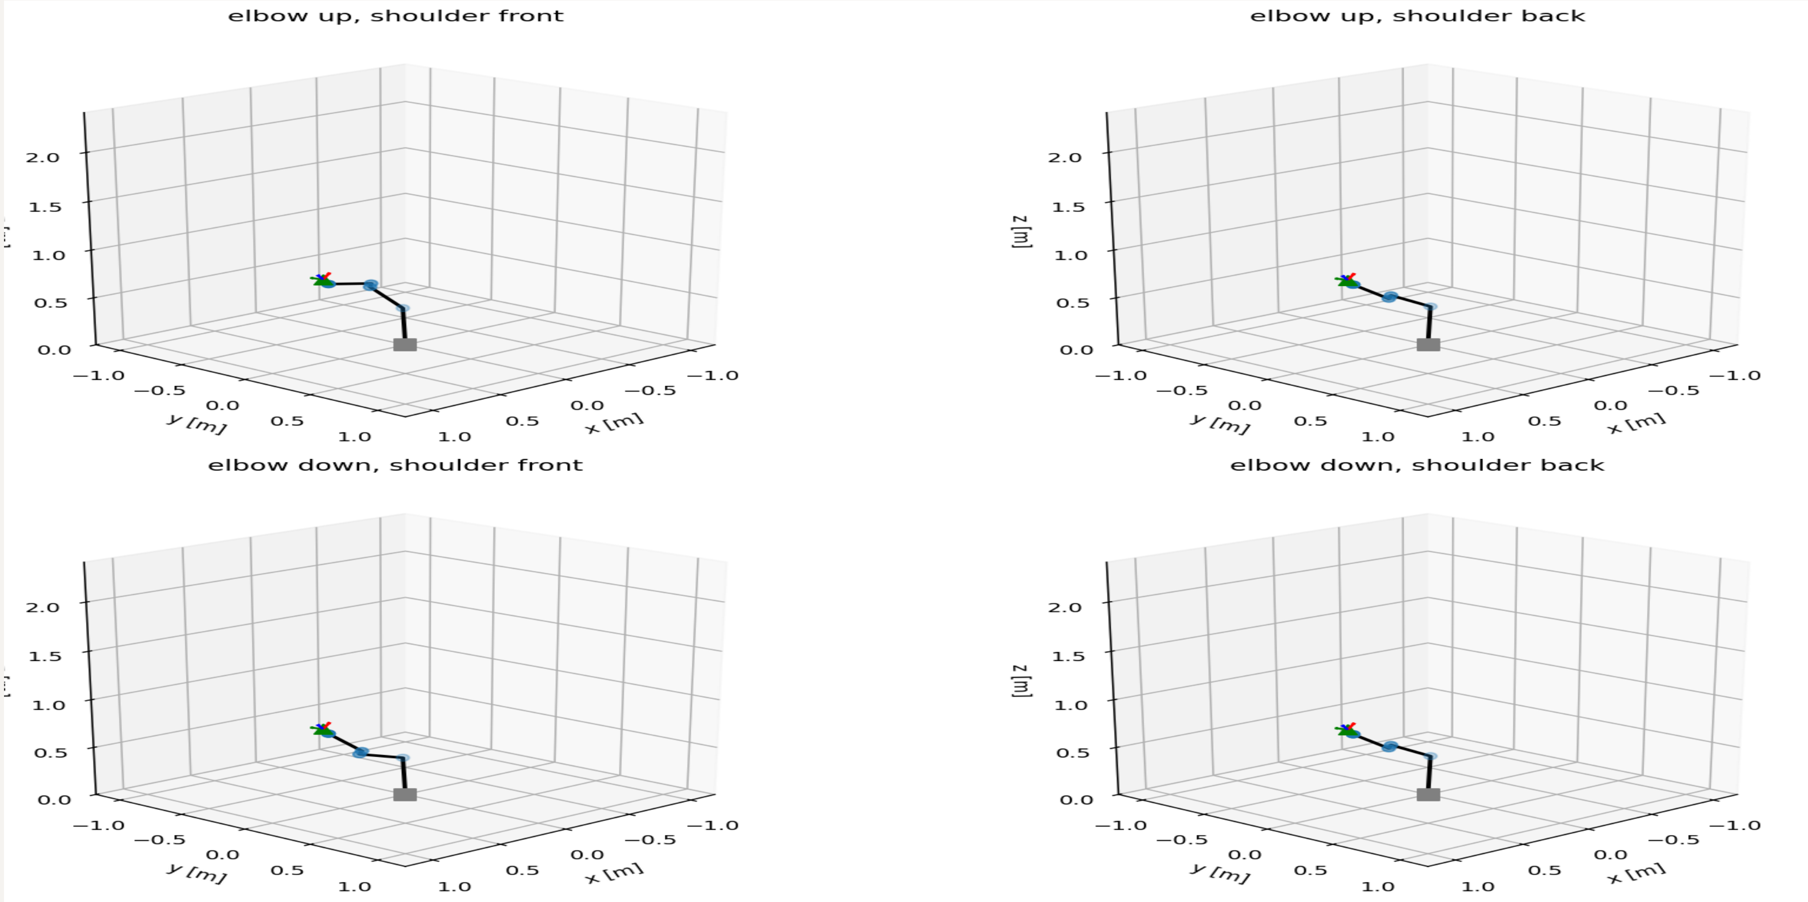
My URDF Model



★ Replace with problem8_urdf_vs_stick.gif in Keynote

4 IK Branches

Same target · 4 different arm configurations



Velocity Arrows

v (magenta) · ω (cyan)
